

S-1600V-CAD Series

Premium Bank Grade Canadian Currency Value Counters

Engineered for
Performance and
Reliability.

The Semacon S-1600V Series Premium Bank Grade Canadian Currency Counters with Value Mode feature heavy duty construction, Semacon's SmartFeed™ Advanced Banknote Feed System Technology and ultra high speed performance. These counters were specifically designed to handle Canada's new polymer banknotes, even when mixed with paper banknotes. Together these features combine to offer Canadian banks and businesses one of the most accurate and robust high speed desktop currency counting machines available while setting the standard for durability and reliability.

Premium Bank Grade Canadian Currency Value Counters

Ease of Use

The S-1600V Series Premium Bank Grade Canadian Currency Value Counters are intended for use in high volume environments such as banks, credit unions, casinos and large retailers. They feature an intuitively designed control panel including a 10 digit keypad for batching along with buttons for commonly used features making these counters easy to operate in a variety of applications.

Ultra High Performance

These counters offer ultra high speed counting at up to 1800 banknotes per minute and are manufactured with high performance, full duty cycle components designed to run 24/7 for many years in the harshest environments.

Efficiency and Reliability

Our SmartFeed™ Advanced Banknote Feed System Technology rapidly and reliably processes banknotes of all conditions ranging from very worn to brand new. Four variable counting speeds allow the operator to detect out of place denominations at the slower speeds or maximize efficiency at the higher speeds.

Precision Counting Accuracy & Error Detection

The S-1600V Series Counters are engineered with Semacon's SmartCount™ intelligent banknote screening system which analyzes each banknote to detect all possible types of banknote feeding errors. This technology ensures the most accurate counts available in a desktop currency counter.

Advanced Counterfeit Detection Technology

Select models offer Semacon's SmartDetect™ Advanced Counterfeit Detection System designed to pinpoint suspect banknotes featuring ultraviolet (UV) detection for banknote paper properties and (optionally) dual magnetic (MG) detection for banknote ink properties.

Value Counting Mode

The S-1600V Series Counters include a Value Mode feature which enables the operator to select the denomination being counted and in this mode the counter displays the totals in dollars. Multiple denominations may be counted and accumulated in Value Mode enabling the machine to total a teller station or cash drawer.

Available for International Markets

S-1600V Series Premium Bank Grade Currency Value Counters are in use worldwide and have been proven to work with a wide variety of currencies including polymer banknotes of all types.

Semacon Quality Promise

All Semacon machines are extensively tested and burned in under rigorous conditions in our US facility, assuring the highest possible quality and reliability.

S-1600V-CAD Series

Feed System:

SmartFeed™ Friction Roller System

Hopper Capacity:

250 – 400 Notes

Stacker Capacity:

200 – 300 Notes

Note Size:

From 100 x 50 to 193 x 100 mm

Power Source:

100 – 240V / 50 – 60Hz
40W

Dimensions:

10.5"W x 11.5"D x 9.75"H

Weight:

14 lbs
